GoldTone Changes the Rehab Landscape - Again!

In 2002 TheraTogs changed the physical rehabilitation landscape with the introduction of 'wearable therapy' - allowing clinicians to extend their therapy sessions into daily life with TheraTogs, an adaptable and dynamic garment-and-strapping system worn under the client's clothes. TheraTogs were invented and continue to be developed by Beverly Cusick, PT, MS, COF, an established expert in pediatric orthopedic and neuromotor development.

Eight years later, we've changed the game again - with TheraTogs™ ULTRA, the next generation of TheraTogs neuromuscular training systems that correct functional and postural alignment with limitless repetitions during daily activities. In addition to several design and configuration improvements, TheraTogs ULTRA products are made of GoldTone™ - a unique, high-performance knitted fabric designed specifically to meet the demands of TheraTogs systems.

"GoldTone fabric was developed over three years of R&D and field trials to meet the high-performance requirements of TheraTogs systems," said TheraTogs Research Program Manager Ann Sturgill, MS. "GoldTone has superior stretch, rebound and recovery properties that were specifically formulated for the demands of biomechanical and neuromotor retraining."

Manufactured using a patented fabric finishing process, TheraTogs ULTRA components made of GoldTone will maintain biomechanical corrections firmly for over nine hours of daily wear, and rebound to their original size overnight. The lustrous GoldTone fabric surface is custom-matched to the vigorous Velcro® hook used for strapping and garment closures, and can handle repeated application and removal of garment and strapping tabs. GoldTone is a subtle golden tan in color, making it hardly noticeable under clothing.

"We're very pleased with the performance of the new material," said TheraTogs CEO Lee Taylor. "Clinicians and families who haven't used TheraTogs before will find GoldTone garments durable and easy to use for immediate results - and experienced "Toggers" will find that GoldTone's stretch, rebound, and recovery are even better than the previous blue TheraTogs material." He noted that clinicians who are familiar with TheraTogs may also find that GoldTone's superior strength requires less strapping to achieve desired improvements.

TheraTogs, Inc. is the developer and manufacturer of TheraTogs, the revolutionary wearable therapy system that is changing the practice of physical rehabilitation for all ages. TheraTogs are manufactured in Telluride, Colorado and are available through distributors and providers all over the world.
